

JavaScript Exercises

10 Practice Programs – Complete Solutions

Language: JavaScript (Browser Console / Node.js) | Total Questions: 10 | Prepared for GitHub Upload

Q1. Sum, Subtraction, Multiplication & Division of Two Numbers

Task: User se 2 numbers input lo (prompt) aur unka sum, subtraction, multiplication aur division display karo.

```
// Q1: Basic Arithmetic Operations
let num1 = parseFloat(prompt('Enter first number:'));
let num2 = parseFloat(prompt('Enter second number:'));

let sum = num1 + num2;
let subtraction = num1 - num2;
let multiplication = num1 * num2;
let division = num2 !== 0 ? num1 / num2 : 'Cannot divide by zero';

console.log('Sum: ' + sum);
console.log('Subtraction: ' + subtraction);
console.log('Multiplication: ' + multiplication);
console.log('Division: ' + division);
```

Q2. Even or Odd Number Check

Task: Ek program likho jo check kare ke diya gaya number even hai ya odd.

```
// Q2: Even or Odd Check
let number = parseInt(prompt('Enter a number:'));

if (number % 2 === 0) {
  console.log(number + ' is an Even number.');
```

```
} else {
  console.log(number + ' is an Odd number.');
```

```
}
```

Q3. Voting Eligibility Check (Age 18+)

Task: User se age input lo aur check karo ke woh voting ke liye eligible hai ya nahi (18+).

```
// Q3: Voting Eligibility
let age = parseInt(prompt('Enter your age:'));

if (age >= 18) {
  console.log('You are eligible to vote!');
} else {
  let remaining = 18 - age;
  console.log('You are NOT eligible to vote.');
```

```
  console.log('You need ' + remaining + ' more year(s).');
```

```
}
```

Q4. Sum of 5 Numbers Using Loop

Task: Ek array banao jisme 5 numbers hon. aur unka total sum calculate karo using loop.

```
// Q4: Array Sum Using Loop
let numbers = [10, 20, 30, 40, 50];
let totalSum = 0;

for (let i = 0; i < numbers.length; i++) {
    totalSum += numbers[i];
}

console.log('Array: ' + numbers);
console.log('Total Sum: ' + totalSum);
```

Q5. Palindrome Check

Task: User se ek string lo aur check karo ke woh palindrome hai ya nahi.

```
// Q5: Palindrome Check
let str = prompt('Enter a string:').toLowerCase();
let reversed = str.split('').reverse().join('');

if (str === reversed) {
    console.log('"' + str + '" is a Palindrome!');
} else {
    console.log('"' + str + '" is NOT a Palindrome.');
```

Q6. Largest of 3 Numbers (Function)

Task: Ek function banao jo 3 numbers mein se largest number return kare.

```
// Q6: Largest of 3 Numbers
function findLargest(a, b, c) {
    if (a >= b && a >= c) return a;
    else if (b >= a && b >= c) return b;
    else return c;
}

let n1 = parseFloat(prompt('Enter first number:'));
let n2 = parseFloat(prompt('Enter second number:'));
let n3 = parseFloat(prompt('Enter third number:'));

let largest = findLargest(n1, n2, n3);
console.log('Largest number is: ' + largest);
```

Q7. Print Even Numbers from 1 to 20 (Loop)

Task: 1 se 20 tak numbers print karo lekin sirf even numbers show karo (loop use karo).

```
// Q7: Even Numbers from 1 to 20
console.log('Even numbers from 1 to 20:');

for (let i = 1; i <= 20; i++) {
    if (i % 2 === 0) {
        console.log(i);
    }
}
```

```
}  
}
```

Q8. Factorial Calculator

Task: Ek program likho jo kisi bhi number ka factorial calculate kare.

```
// Q8: Factorial Calculator  
function factorial(n) {  
  if (n < 0) return 'Invalid! Negative numbers not allowed.';  
  if (n === 0 || n === 1) return 1;  
  let result = 1;  
  for (let i = 2; i <= n; i++) {  
    result *= i;  
  }  
  return result;  
}  
  
let num = parseInt(prompt('Enter a number to find factorial:'));  
console.log('Factorial of ' + num + ' = ' + factorial(num));
```

Q9. 5 Names in Array – Print in Reverse Order

Task: Ek array mein 5 names store karo aur unko reverse order mein print karo.

```
// Q9: Names Array in Reverse Order  
let names = ['Ali', 'Sara', 'Ahmed', 'Zara', 'Usman'];  
  
console.log('Original order:');  
console.log(names);  
  
console.log('Reverse order:');  
for (let i = names.length - 1; i >= 0; i--) {  
  console.log(names[i]);  
}
```

Q10. Password Strength Checker

Task: User se password lo aur check karo: agar length 8 characters se kam ho to 'Weak Password' warna 'Strong Password'.

```
// Q10: Password Strength Checker  
let password = prompt('Enter your password:');  
  
if (password.length < 8) {  
  console.log('Weak Password!');  
  console.log('(Password must be at least 8 characters long)');  
} else {  
  console.log('Strong Password!');  
  console.log('Password length: ' + password.length + ' characters');  
}
```
